# Instructions for prepare an installer for Capitalism Lab Language Pack

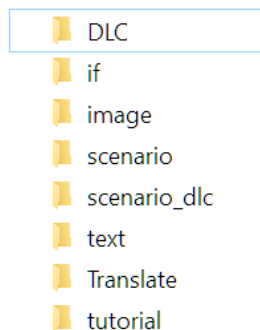

---

## Steps

- 1) Download and install NSIS installer from: <https://sourceforge.net/projects/nsis/>
- 2) Download “CapLab Language Pack installer kit.ZIP” and unpack it to a folder of your choice in your harddisk. It will unpack the following files and the “FILES” folder.

- 3) Now copy your translation/language pack files to this FILES folder. Below is an example of files in the folder.

- 4) Open CapLab\_Translate\_Script.nsi using a text editor like Notepad and edit the following lines with your MOD's information. Below is an example:

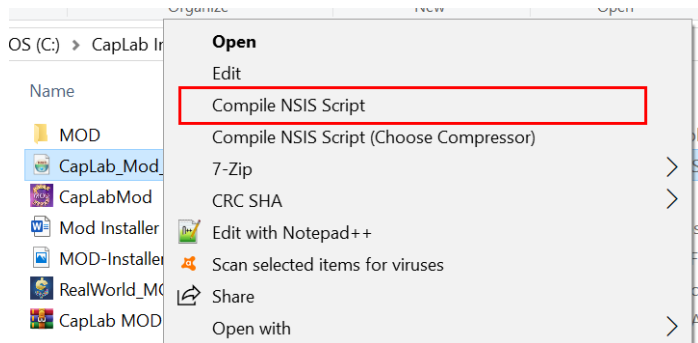

Line 5 to 7:

```
!define PRODUCT_NAME "<Language pack name>" e.g. "French Language Pack for Capitalism Lab"  
!define PRODUCT_PUBLISHER "<the author name>"
```

Line 37:

```
OutFile "<Language pack installer EXE file name>" e.g. "French_CapLab_Language_Pack.exe"
```

5) The final step is to call NSIS to prepare the installer. To do so, first right click on the “CapLab\_Language\_Installer\_Script.nsi” file. It will open a window like below. Select “Compile NSIS Script” and it will start to build the installer.

6) After finishing preparing the installer, it will pop up a window like below. Now you can test the installer.
